

ODPS PM-01 Procurement Sheet

For Single and Sole source purchases

- 1) The efforts made to find other responsive suppliers and a determination that none were found.

OSHP R & D evaluated (4) four commonly used law enforcement medical kits. Their research suggests the North American Rescue ROO M-FAK kit is best suited to our needs. See attached "IOC First Aid Kit Comparison" document.

- 2) How a determination was made that the anticipated cost would be fair and reasonable.

Preliminary market research suggests the price range from \$31.20 - \$161.99 for the items identified in the comparison. Vendor indicates volume discounted price of \$55.98 for the ROO M-FAK medical kit.

- 3) The agency's history with the supplier.

OSHP has not previously used this vendor.

- 4) Any other facts supporting the selection process.

As critical incidents have increased in the United States, it has been essential to prepare our Troopers to respond at a moment's notice. We have started this process by equipping them with new rifles and ballistic plates. One additional tool needed is an Individual First Aid Kit (IFAK). This IFAK will allow a trooper to treat themselves or others in an emergency. Research and Development and the Special Response Team tested many different IFAKs and determined that the best option to fit our needs is the ROO M-FAK. This kit has all the tools for a quick treatment response. It is sold by North American Rescue and retails for \$79.99. We believe this is the essential kit to pair with our officer protection package as an additional lifesaving measure. The kit can be secured onto the exterior of the ballistic vest carrier. The ROO M-FAK is compact, lightweight, and easy to use.

From a procurement perspective, multiple dealers are available (making this a Single Source / Model Specific Request). Additionally, ODNR indicates their law enforcement personnel may be interested in this product. Same may be said for local law enforcement.
